

Clinical safety dashboard — Impact of balancing on glucose prediction accuracy

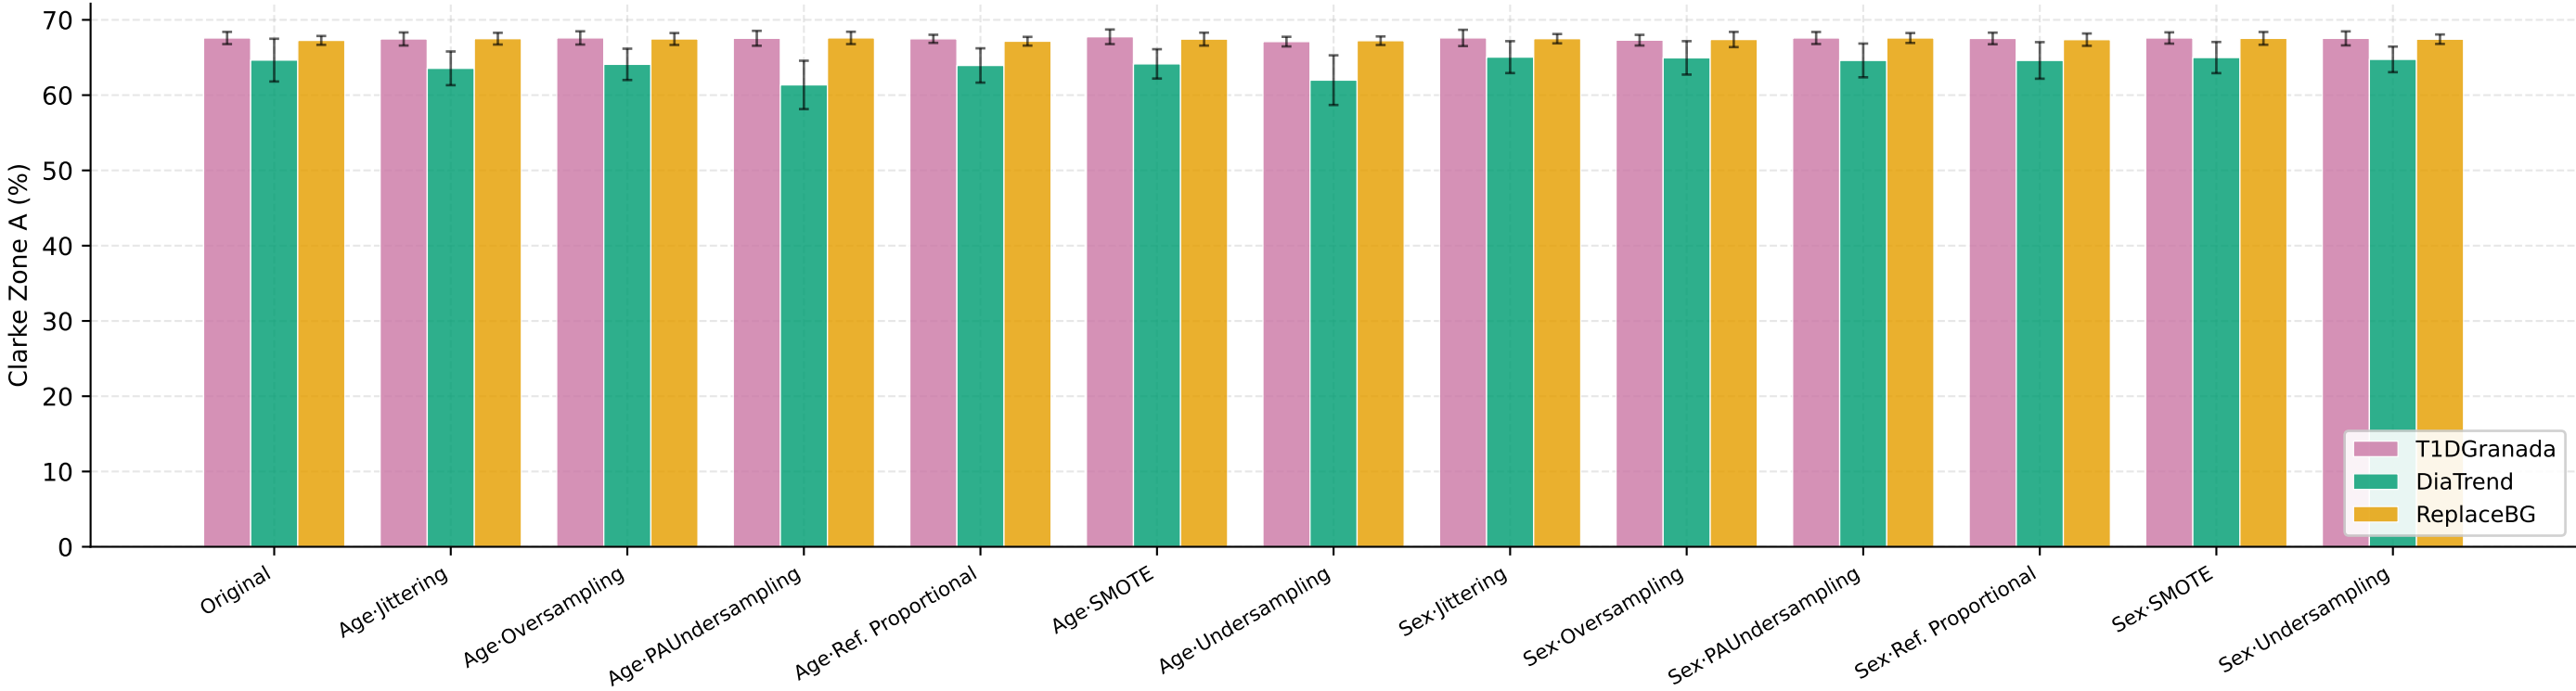

A | RMSE improvement · Hypo L2 (<54 mg/dL) — CRITICAL

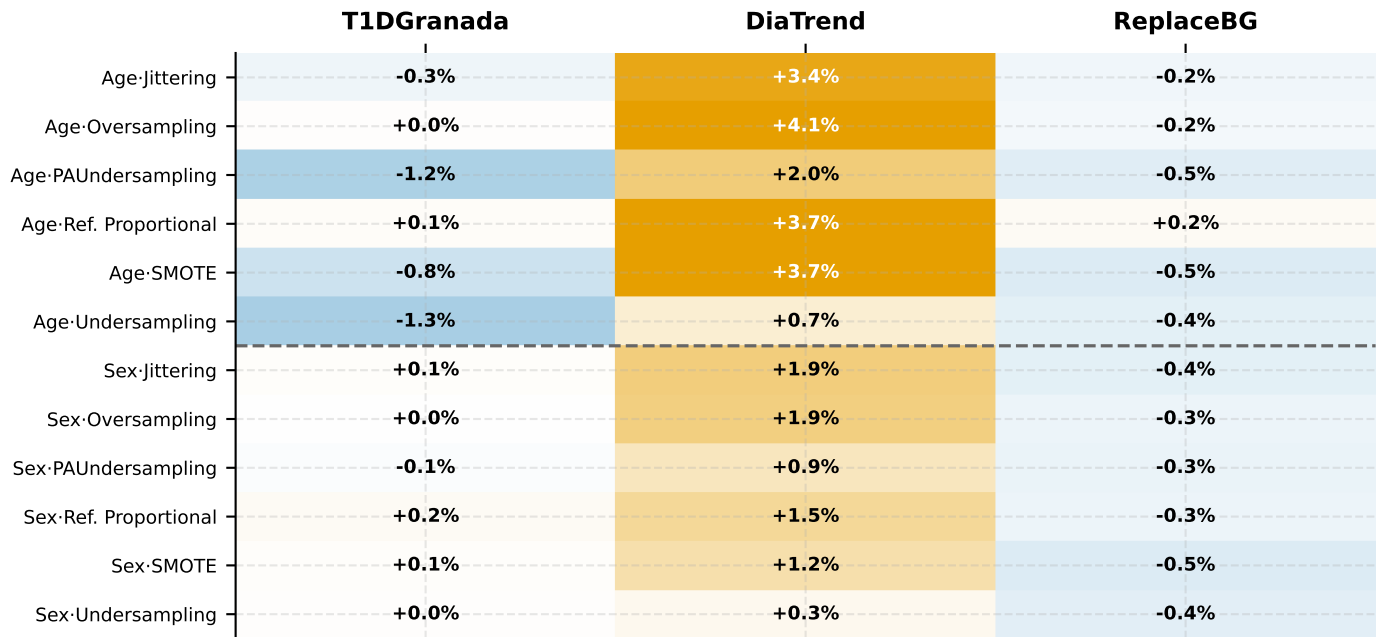

B | RMSE improvement · Hypo L1 (54-69 mg/dL)

C | Clarke Zone A (%) — clinically safe predictions ↑ better

D | RMSE improvement · In Range (70-180 mg/dL)

E | RMSE improvement · Hyper L1 (181-250 mg/dL)
